

2.8 PROGRAMMED (FUNDED) SHORT-TERM TRANSPORTATION IMPROVEMENTS

The programmed short term transportation improvements were acquired from both the Arizona Department of Transportation (ADOT) and three Councils of Government (COGs). The State Transportation Improvement Program (STIP) identified roadway improvements for the 2008 to 2011 Fiscal Years and the COGs Transportation Improvement Programs (TIPs) identified the transportation improvements for the 2008 to 2012 Fiscal Years. Table 2-28 identifies the roadway improvements for the state and local areas. This table includes the name of the project, the location, the type of work to be conducted, the year of funding, the funding sources and the total cost of the project improvement.

ADOT 5-Year Program

The Arizona STIP is a four-year plan that was developed by ADOT in order to identify the design, construction, and/or implementation of various transportation improvements throughout the state. As shown in Table 2-28, there are 27 short-term roadway improvements identified in the STIP for the Eastern Arizona Study Area. The respective county for each project is located in parentheses under the "Location" column.

Local TIPs/CIPs

Local roadway improvements were acquired from three COGs within the Eastern Arizona Study Area. These include:

- Northern Arizona Council of Governments (NACOG),
- Central Arizona Association of Governments (CAAG),
- Southeastern Arizona Governments Organization (SEAGO).

The COGs were the most reliable source for locating programmed roadway improvements because several counties and cities were either in the process of updating their CIP, or they were already working with their respective COG to develop a list of short term roadway improvements. Table 2-28 identifies the local programmed roadway improvements under the "Local TIP/CIP" section. The specific county or city is identified in parentheses in the "Location" column of this table.
